TELE HANDLER

SKY UMBRELLA GENERAL TRANSPORT BY HEAVY TRUCKS

A telescopic handler, or telehandler, is a machine widely used in agriculture and industry. It is similar in appearance and function to a forklift but is more a crane than forklift, with the increased versatility of a single telescopic boom that can extend forwards and upwards from the vehicle. On the end of the boom the operator can fit one of several attachments, such as a bucket, pallet forks, muck grab, or winch. Types of tele-handlers available:

- 540-170
- 535-140
- 537-125
- 532-120

532-120 TELE HANDLER
